

BASIC INFORMATION

Diagonal duct fan DVP HIDE with duct connection diameter of 100, 125 or 150 mm. The fan is designed for connection to air ducts and air extraction from small and medium-sized rooms such as bathrooms, kitchens, garages, etc. Thanks to its overall small dimensions, it facilitates installation even in hard-to-reach places with limited space.

Installation:

DVP HIDE fans are installed in the duct as continuous and fixed to a wall, ceiling or frame prepared for the installation of a circular duct. Connection to the electrical installation must be carried out by qualified personnel!

After unpacking the fan, check for :

- the condition of the power cable (cuts, cracks in the insulation)
- the condition of the fan housing (dents, deformation)
- the propeller should not rub against the casing.

The data on the technical label should correspond to the parameters of the given electrical installation.

FEATURES AND BENEFITS

Three-stage duct fan

- Connection to pipe dia. 100,125,150 mm
- Ball bearings
- Small dimensions
- High coverage IPX2 (resistance against splashing water at all angles)
- Suitable for extracting air from small and medium-sized rooms
